*This Application is Ideal for Emergency Notification
Where Time is of the Essence*

EMERGENCY NOTIFICATION SYSTEM

Features:

- Notifications can be scheduled for up to one year in advance.
- Easy access through our SSL Web Portal
- Voice messages can be sent via our text to speech engine or through the upload of a WAV file.
- Messages may be sent via voice, text to cell, email, or through all of these methods.
- All messages will be sent through our system with the **highest priority**.
- Reports are available to show the status of the voice phone calls, as well as email and text notification status.
- Voice notification options allow for the amount of retries, and there could be a different message for a voice answering machine, or a live person.
- The system's current configuration is capable of sending out thousand of calls per hour.
- Unlimited lists can be stored for future access. As an example, separate lists may be kept for various divisions. Separate notifications can be sent on the fly for any one or all of your departments.
- Message information may be customized for each department, or a single message can be sent company wide.
- Easy integration with the **EZnet Scheduler®** and other Web based systems.

**Users: US Government, Schools, Municipalities
State Governments, Police Departments, American
Red Cross and Other Entities Requiring Emergency
Notification**
